Summit's My Projects Portal

Visibility, Flexibility, and Control
Finish your project on time and on budget

Summit's **My Projects Portal** gives you visibility, flexibility, and control of your entire project management cycle. With the ability to schedule releases, track shipments, and review historical project data, you control your project from material take off (MTO) through delivery, invoicing, and every step in between.

Easily manage projects with:

1. **End-to-End Visibility –** Manage multiple BOMs, releases, and MTOs easily throughout the project lifecycle.

2. **24/7 Online Access –** Your project doesn't stop at 5pm. Neither do we. See your project status day or night from any desktop or mobile device.

3. **Release Management –** For each MTO, see materials authorized for release and route through your company's approval process. Once approved, schedule releases so materials arrive when and where you need them.

4. **Delivery Tracking –** Specify exactly where you need your materials delivered. Proof of delivery is only a few clicks away.

5. **Robust Reporting –** You need customized attributes and search capabilities. We have you covered. You can search by drawing number, BOM, building, MTO, or site location.

Call your local Account Manager today to get started with My Projects Portal.
